Claims 13-22, 26-28,30-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lewis et al for the same reason set forth in paragraph 6 of paper no7.

In the amendment filed June 26, 2003, applicant argues Lewis et al disclose a process that is totally different from the claimed BCB making process because there is no teaching or suggestion that the flakes prepared therein would adhere to each other. This argument is not persuasive. Lewis et al disclose other related food products such as granola bars, confectionery and so on can be prepared. Thus, it is obvious that the flakes can be made to adhere to each other in order to make a bar. It is well known in the art that granola bars are made of cereal grains adhering together. Lewis et al also teach the cereal grains can be toasted and the grains can be used to make other cereal product. Thus, it would have been obvious to one skilled in the art to make other cereal product using the grains to obtain the benefit of the waxy grains. If the flakes can be adhered together to make a bar, the flakes can be agglomerated to make other cereal product.

Claims 1-11,24-25 and 29 are allowable over the prior art because Lewis et al do not disclose the degree of gelatinization claimed and there is no suggestion to do so.
